

# OEKO-TEX®

# ECO PASSPORT

## What is the OEKO-TEX® ECO PASSPORT?

OEKO-TEX® ECO PASSPORT is an independent certification system for chemicals, dyes and auxiliaries.

A multi-stage verification process analyses whether the products and each individual ingredient meet specific requirements with regard to sustainability, safety and compliance with statutory regulations.

## What do you get?

With completion of the certification, the applicant receives the following documents:

- RSL report: A short report on the result of the CAS number screening
- Laboratory report: A report on the analysis results
- Certification report: A report on the key data and scope of certification
- Certificate: The certificate confirms the successful certification of the products named on it. It is associated with ZDHC MRSL Conformance on Level 1, 2 or 3 (depending on which option was chosen)
- Self-assessment report: A short report about the result of the evaluation of the self-assessment questionnaire
- On-site visit report: A short report on the results of the on-site visit (if this option was chosen)

# How is the ECO PASSPORT integrated in the OEKO-TEX® system?

The ECO PASSPORT includes virtually the complete textile and leather production chain as the chemicals, dyes and auxiliaries certified with it are used at all levels and in all areas of textile production. On the one hand it integrates perfectly with the OEKO-TEX® STANDARD 100 and LEATHER STANDARD, on the other hand, it serves as proof of the use of sustainable chemical products for OEKO-TEX® STeP certification.

## Your route to certification
